TENNIS COURT SURFACING

NOVACOURT is a high solids, 100% acrylic coating system that is designed for the court owner who is seeking a quality tennis court surface, and is willing to contribute muscle power to lower the cost of the project. Private court owners, municipalities, school districts, military installations, persons and clubs who have staff to do the actual work are the people this product is formulated for.

NOVACOURT is supplied in a ready-to-use format, and packaged in 5 gallon pails. The application is simple. Two coats applied 90 degrees to each other is recommended. The resulting surface will be equal to the average three coat application as NOVACOURT is more concentrated than the typical tennis court coating. Both coats are the same product, thus simplifying the application.

With careful application and some hard work, an owner can save a large amount of money and end up with a tournament-quality tennis court surface.

The NOVACOURT surface is non-slip and is not "sticky". We are able to achieve this quality because the aggregates used are round and contain no sharp edges. This allows us to have a lot of texture, but a very low abrasion factor.

NOVACOURT is available in: Grass Green, Nova Green, Classic Green, Red, Burgundy, Terra Cotta, Sand Dune, Blue, and Brown.

Sport surfaces are all we do.

We have to do it better.

Ask for Nova.
